## III. CLAIM AMENDMENTS

Please amend claims 1, 2, 4, 18 and 22 as set forth in the following listing of the claims.

- 1. (Currently Amended) A method for establishing and making a check for a communications connection, in which method an electrical communications connection is set up between a calling party and receiving party, in which method before establishing the communications connection proper, there is a making of a check is made for the calling party concerning the ability of the receiving party to receive the message sent by the calling party and, based on that information, there is making of a decision is made about the establishment of the communications connection proper.
- 2. (Currently Amended) A method according to claim 1 wherein the check for the calling party concerning the ability of the receiving party to receive the message of the calling party comprises steps in which of:
  - dialing the receiving party's number is dialled,
  - <u>fetching</u> the activity status data of the receiving party are <del>fetched</del> from an activity log,
  - presenting possible options of action are presented and selecting the best of them is selected,
  - examining it is examined whether the option of action is
    possible, and

- the communications connection proper is established if the option of action is found possible.
- 3. (Original) A method according to claim 2 wherein the data representing the activity status of the receiving user are fetched from an activity status server.
- 4. (Currently Amended) A method according to claim 2 wherein if the option of action decided upon is impossible to carry out, it is checked there is a step of checking whether the option of action can be carried out later.
- 5. (Original) A method according to claim 4 wherein if the option of action can be carried out later, the data representing the activity status of the receiving party are fetched again after a time delay.
- 6. (Original) A method according to claim 4 wherein if the option of action decided upon cannot be carried out after a time delay, a communications connection proper is not established.
- 7. (Original) A method according to claim 1 wherein the communications connection proper is a telephone connection.
- 8. (Original) A method according to claim 1 wherein the communications connection proper is a text message.

- 9. (Original) A communications connection set-up and checking arrangement, comprising a terminal of the calling party, terminal of the receiving party and an electrical communications connection between the two parties, which arrangement further comprises user-specific activity logs.
- 10. (Original) A communications connection set-up and checking arrangement according to claim 9 which further comprises an activity status server connected with the user-specific activity logs.
- 11. (Original) A communications connection set-up and checking arrangement according to claim 10 wherein the activity logs are files in the activity status server.
- 12. (Original) A communications connection set-up and checking arrangement according to claim 9 wherein the activity log is a file in the terminal of the user.
- 13. (Original) A communications connection set-up and checking arrangement according to claim 9 wherein the activity log comprises an activity status decoding function, user profile editing function and an activity status application function.
- 14. (Original) A cellular network comprising terminals, base stations, base station controllers and switching centers, which network further comprises an activity status server for storing a user-specific activity log.

- 15. (Original) A cellular network according to claim 14 wherein the activity status server is connected with a switching center.
- 16. (Original) A cellular network terminal comprising a means for entering data in the terminal, data display means, data transmission means, data reception means, memory unit and a control unit, which terminal further comprises an activity status monitoring means.
- 17. (Original) A terminal according to claim 16 wherein part of the memory of the terminal can be allocated for creating and maintaining a user-specific activity log.
- 18. (Currently Amended) A terminal according to claim 16 wherein part of the <u>a</u> SIM card connected with the terminal can be allocated for creating and maintaining a user-specific activity log.
- 19. (Original) A terminal according to claim 16 which further comprises a means for displaying activity status data for the receiving party fetched from an activity status server.
- 20. (Original) A terminal according to claim 19 which further comprises a means for making a decision about whether a communications connection proper will be established.

- 21. (Previously Presented) Software means for creating a context-based data system which software means is arranged so as to realize the steps of the method according to claim 1.
- 22. (Currently Amended) <u>Software means</u> An application program according to claim 21 <u>further comprising an application program</u> stored on a data transfer medium, in the memory of a terminal, on a SIM card of a terminal, or in a cellular network device.
